

Fort Branch Creek Reach 6 & 7 Channel Rehabilitation

Project Location

Along Fort Branch Creek, from Fort Branch Blvd south to just beyond the Eleanor St cul-de-sac

Project Description

This project used an integrated approach to resolving flooding, erosion, and habitat degradation problems while improving water quality along the creek. Project components include:

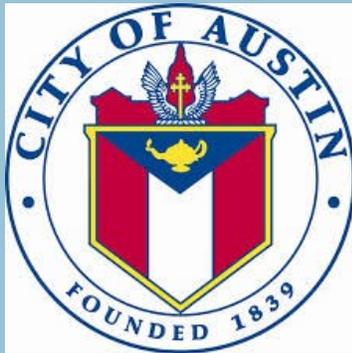

- Purchasing some flood-prone properties that are immediately adjacent to the creek.
- Stabilizing approximately 2,750 feet of stream banks with limestone boulders and vegetated soil walls
- Removal of the culverts and replacement with a new bridge on Fort Branch Boulevard
- Storm sewer pipe upgrades
- Reducing flood risk through channel modifications along approximately 1,600 feet of creek.
- Revegetating the banks with native plant species.

Completion Date

February 2014

Length of Stream Restored

2,750 ft
