Salmonellosis Data Profile, Travis County^{1, 2}

2014 Salmonellosis Case Counts

Total	305	100.0%
Confirmed	271	88.9%
Probable	34	11.1%

Gender Distribution

Male	150	49.2%
Female	155	50.8%

Median Age	20 Years
Age Range	12 Days – 96 Years

Age Distribution

Under 1 Year	35	11.5%
1-4 Years	54	17.7%
5-9 Years	25	8.2%
10-19 Years	34	11.1%
20-29 Years	37	12.1%
30-39 Years	35	11.5%
40-49 Years	19	6.2%
50-59 Years	28	9.2%
60 Years and Older	38	12.5%

Data presented in this report includes both confirmed and probable cases of Salmonellosis reported in Travis County. This report includes completed case investigations only. All 2014 data are preliminary. The data provided for 2014 was generated on February 11, 2015.

The number of Salmonellosis cases varies over time in Travis County (Figure 1). In 2014 to date, approximately 36% of all Salmonellosis cases occur in individuals eight years old and younger (Figure 3). However, data is not complete and preliminary results should be interpreted with caution. The true impact of Salmonellosis on the community will be determined from finalized data.

-
- ⁵ Population Estimates and Population Projections are produced by different methods. If data are to be used in trend analysis, or other comparative treatments, unexpected results may be obtained if data from both estimated and projected series are used.
- ⁶ Data by month of report may not include all cases for that MMWR year. All data are pulled by MMWR year and not calendar year. As a result, there are some instances in which cases are reported with a MMWR year in one year but the actual report was received the following calendar year. Consequently, the annual totals may not equal the exact total number of cases when each month's totals are summed.
- ⁷ When the number of reported cases is less than 20, rates may not be considered reliable.
