

# Ullrich Water Treatment Plant Community Meeting

November 15, 2023

# Agenda

- Welcome
- Operations Update
- Sound Study Update
- Questions and Answers
- Conclusion

# Opening Comments

Charles Celauro, Assistant Director of Engineering Services

# Operations Update

Stephanie Sue, PE

# Plant Overview

- One of three City of Austin drinking water plants
- Built in 1968
- Upgraded in 2006 from 100 MGD capacity to current capacity
- 167 MGD capacity
- Provides water to residents and wholesale customers predominately in South Austin including the community of West Lake Hills

# Basin Cleaning Update

- Annual activity to maintain basins and water treatment capabilities
- Required due to calcium carbonate accumulation that is inherent to treatment process
- All basins have been cleaned since 2021
- Basin 7 cleaned in Fall 2023

# Wildfire Mitigation Plans

- Downed trees and limbs will be cleared on the Rocky River Rd buffer lot and have been completed on land near West Lake Hills City Hall
- Additional measures, such as Shaded Fuel Breaks, will not be implemented based on neighbor feedback

# Sound Modeling Summary

Bryan Barnett, PE

# Overview

- Hired Engineering Consultants, Kennedy Jenks & CSTI
- Recorded ambient sound and vibration data – Nov. 17-21, 2022
  - Measured Nighttime Sounds => Comparable to 2007 Nelson Data Collection
  - New: Continuously Measured Ambient Daytime Sounds
  - New: Measured Specific noises, such as basin cleaning equipment
  - New: Measured ground vibrations
- Completed Sound Modeling to develop mitigation techniques

# Background – Kathy Fretwell, P.E.

- Professional Engineer, Vice President
- 29 Years Experience in Water & Wastewater Engineering
  - Design and Construction of Water and Wastewater Treatment Plants
  - Pump Stations
  - Small & Large Diameter Pipelines

# Background – Arno Bommer

- ♦ Graduate of MIT
- ♦ Working in acoustics since 1982
- ♦ Board certified by the Institute of Noise Control Engineering (INCE/USA)
- ♦ Awarded the Laymon N. Miller Award for Excellence in Acoustical Consulting by INCE/USA and NCAC in 2022

# Modeling Overview

- Created 3-D computer sound model for both normal and intermittent operations of Ullrich Facility

- Use model to assess the effectiveness of different noise treatments such as noise barriers and sound absorption

- Report of noise modeling analysis and potential noise treatments is being presented today

# Ullrich Water Treatment Plant

## 2023 Noise Modeling

# Primary Objectives of Noise Modeling

- Utilize Noise Data Collection Results to Evaluate Mitigation Measures
- Analyze Alternatives
- Evaluate Costs of Alternatives
- Recommend Alternatives for Additional Evaluation

# Ways to Describe Sound

- **Frequency** – Measured in Hz (cycles per second). Sounds at different frequencies are often grouped together in octave bands.

- **Loudness**

- **Level** (Amplitude or volume) – Measured in decibels (dB)
- **dBA** (A-weighted sound level) – Single-number rating of “loudness” at all frequencies combined.
- **dB(C)** (C-weighting sound level) – used less often, more emphasis on low frequencies.

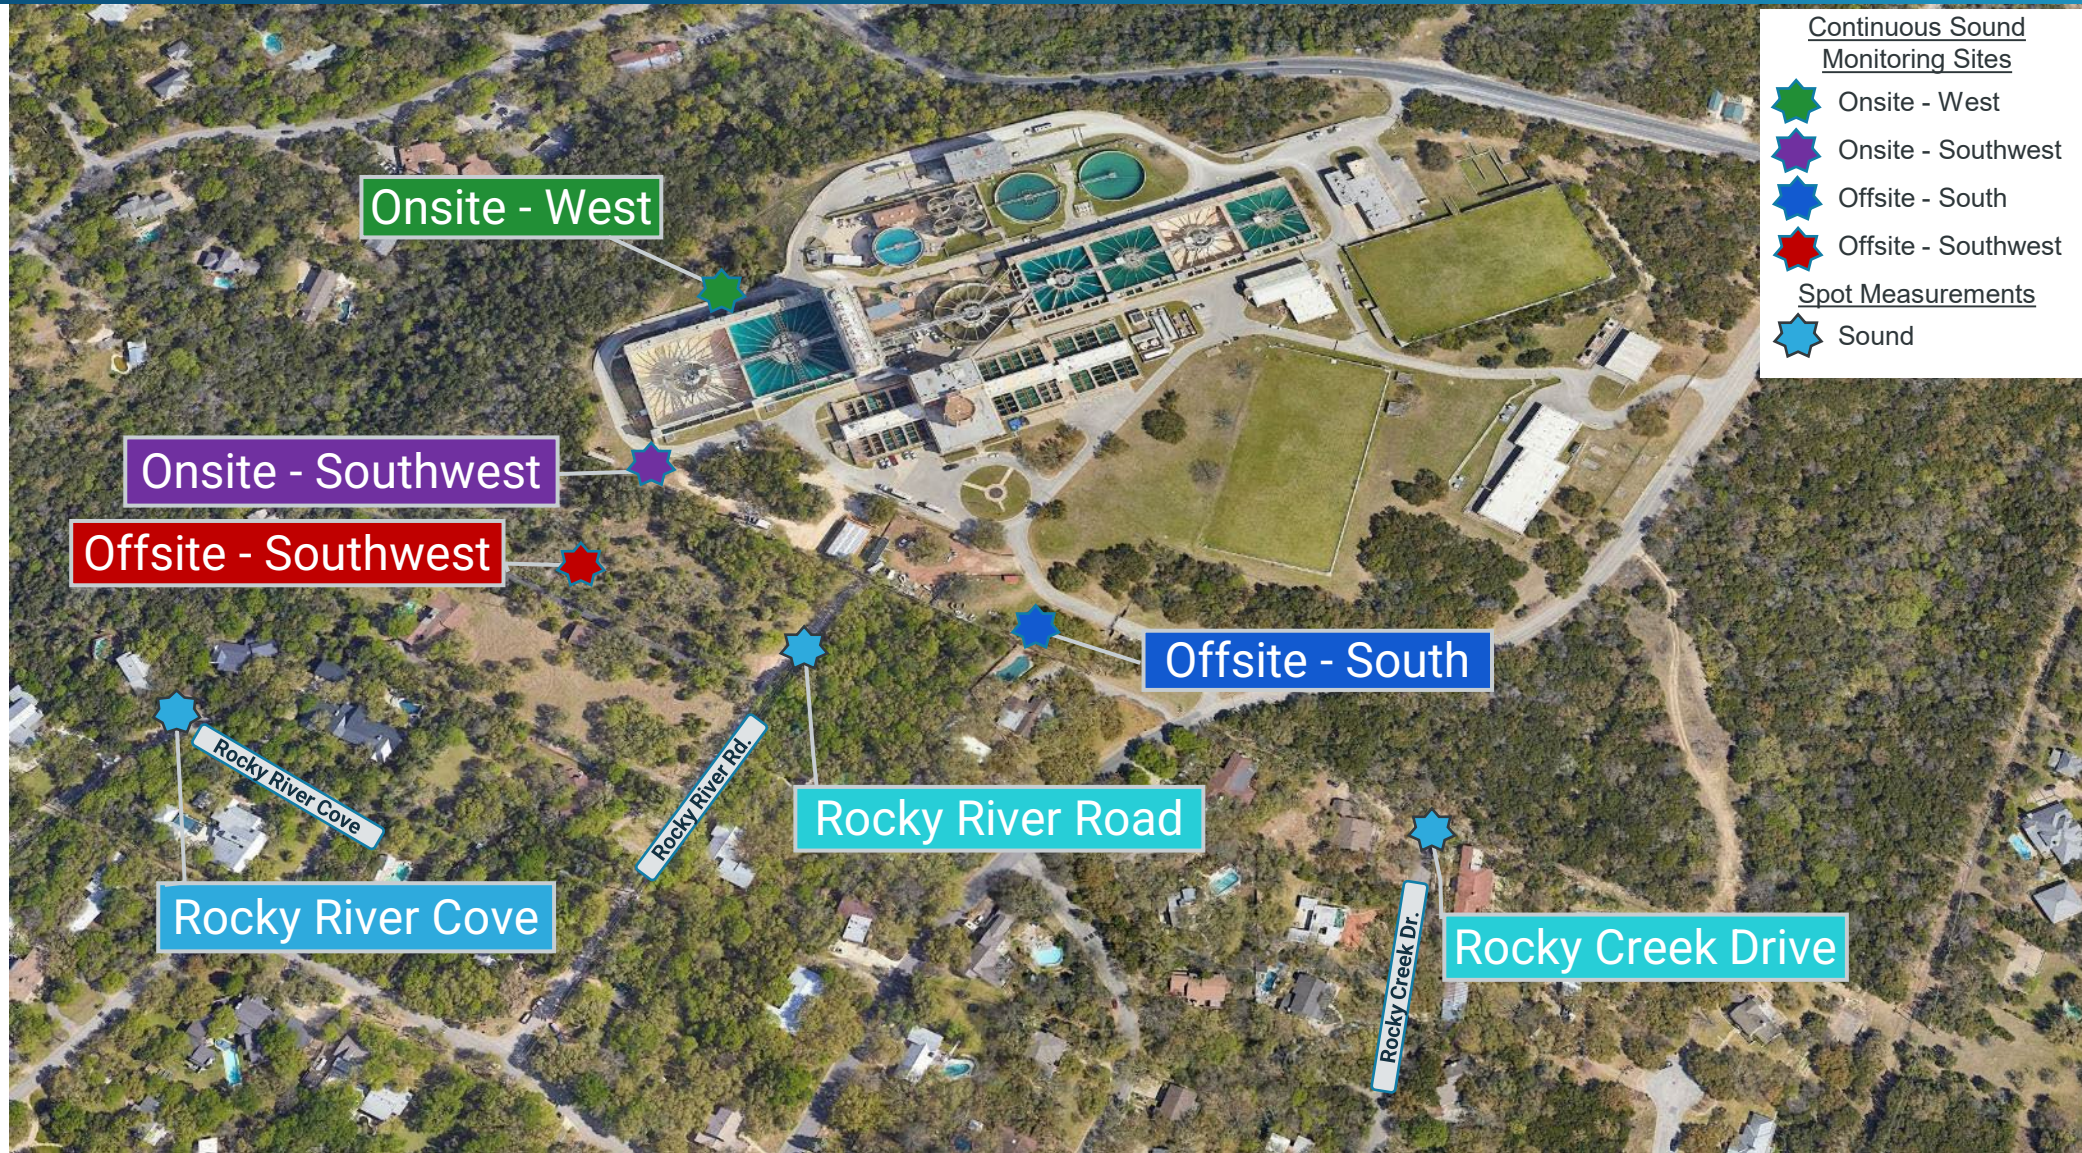

- **Variations in frequency and level over time** – Quantified in several ways including:

- **L<sub>max</sub>** (maximum during sample)
- **L<sub>min</sub>** (minimum during sample)
- **L<sub>eq</sub>** (equivalent sound level – a type of average)
- **LOSHA/TWA** (time-weighted average)

# Map of Main Measurement Positions in 2022 Sound Study

# Main Noise Sources as Measured in 2022 Sound Study

# 3D Sound Modeling

- Information from Original Noise Collection was Utilized to Develop a Sound Model
- Modeled 41 acoustic treatments for 4 baseline scenarios.

# 3D Sound Modeling

## Baseline Scenarios

Normal Operating Conditions

Cleaning of Basin 1

Lime Blower on Truck

Lime Blower in Building

## Noise Receiver Locations Modeled

| Designation | Location                                 |
|-------------|--|
| R1          | Noise Receiver Location 1st Row of homes |
| R3          | Noise Receiver Location 3rd row of homes |

## Noise Barrier Locations & Heights Modeled

| Designation | Location  | Barrier Length (ft) | Barrier Heights (ft) |
|-------------|---|---------------------|----------------------|
| B           | On top of Basins 1 and 2                              | 450                 | 6, 10, 16            |
| D           | Between Ullrich perimeter driveway and fence          | 140                 | 16, 20               |
| F           | Along west fence line, west of Basin 1                | 550                 | 12, 20               |
| R           | Barrier in the buffer zone                            | 750                 | 12, 20, 25           |
| L           | Barrier at grade in lawn to reduce vacuum truck noise | 80                  | 20                   |

## Lime Blower Operational Alternatives Modeled

| Designation | Location                                       |
|-------------|--|
| BB          | Lime Building Blower                           |
| QBB         | Quiet Lime Building Blower (upgraded silencer) |

## Other Alternatives Modeled

| Designation | Location  |
|-------------|---|
| LB Abs      | Sound absorption on the west façade of Lime Building (near Basin 2) |

# Evaluation of 3D Sound Modeling Results

| Insertion Loss | Reduction in Sound Energy | Relative Reduction in Loudness |
|----------------|---------------------------|--------------------------------|
| 5 dBA          | 68%                       | Readily Perceptible            |
| 10 dBA         | 90%                       | Half as Loud                   |
| 15 dBA         | 97%                       | One-third as Loud              |
| 20 dBA         | 99%                       | One-fourth as Loud             |

Source: FHWA Noise Barrier Design Handbook

TxDOT Recommended Noise Reduction Design Goal: **7 dBA**

# Summary of Modeled Treatment Effects at R1 Based on Cleaning of

Modeled Treatment Effects

Noise Barrier Locations & Heights Modeled

| Designation | Location  | Barrier Length (ft) | Barrier Heights (ft) |
|-------------|---|---------------------|----------------------|
| B           | On top of Basins 1 and 2                              | 450                 | 6, 10, 16            |
| D           | Between Ullrich perimeter driveway and fence          | 140                 | 16, 20               |
| F           | Along west fence line, west of Basin 1                | 550                 | 12, 20               |
| R           | Barrier in the buffer zone                            | 750                 | 12, 20, 25           |
| L           | Barrier at grade in lawn to reduce vacuum truck noise | 80                  | 20                   |

Other Alternatives Modeled

| Designation | Location                             |
|-------------|--------------------------------------|
| LB Abs      | Lime Building with sound absorption* |

# Summary of Modeled Treatment Effects at R1 Based on Lime Blower Operations

Modeled Treatment Effects

Note: Ullrich Staff are utilizing the Building Blower (BB) for current Lime Operations.

Noise Barrier Locations & Heights Modeled

| Designation | Location  | Barrier Length (ft) | Barrier Heights (ft) |
|-------------|---|---------------------|----------------------|
| D           | Between Ullrich perimeter driveway and fence          | 140                 | 20                   |
| F           | Along west fence line, west of Basin 1                | 550                 | 12, 20               |
| R           | Barrier in the buffer zone                            | 750                 | 20                   |
| L           | Barrier at grade in lawn to reduce vacuum truck noise | 80                  | 20                   |

Lime Blower Operational Alternatives Modeled

| Designation | Location                                       |
|-------------|--|
| BB          | Lime Building Blower                           |
| QBB         | Quiet Lime Building Blower (upgraded silencer) |

# Most Effective Noise Modeling Results

|                        | Model Scenario | Description  | Sound Mitigation (dBA Reduction) | Conceptual Cost (\$) (1)(2) | Potential Operational Impact |
|------------------------|----------------|--|----------------------------------|-----------------------------|------------------------------|
| Cleaning Basin 1       | R25            | 25-ft high barrier in the buffer zone  | -7.3                             | Highest                     | None                         |
|                        | B10 + D20      | 10-ft high barrier on top of Basins 1 and 2 + 20-ft high barrier between Ullrich perimeter driveway and fence  | -7.9                             | High                        | Medium/High                  |
|                        | B10 + L20      | 10-ft high barrier on top of Basins 1 and 2 + 20-ft high barrier at grade in lawn to reduce vacuum truck noise | -9.4                             | High                        | Medium/High                  |
| Lime Blower Operations | L20            | 20-ft high barrier at grade in lawn to reduce vacuum truck noise   | -7.6                             | High                        | Medium/High                  |
|                        | BB             | Lime Building Blower   | -11.4                            | Existing                    | None                         |
|                        | QBB            | Quiet Lime Building Blower (upgraded silencer)   | -17.5                            | Low <sup>(3)</sup>          | Low                          |

**Note:**

<sup>(1)</sup> Additional cost and feasibility factors related to implementation need to be further investigated.

<sup>(2)</sup> Cost Range (Low < \$100K < High)

<sup>(3)</sup> Additional investigations needed for selecting upgraded silencer and modifications required for cost assumptions.

# Summary / Recommended Next Step

- CSTI Modeled 41 Mitigation Scenarios. Alternatives for Different Barrier Locations and Heights, as well as Mitigation Combinations for Noise Reduction.
- KJ Developed High-level Conceptual Costs for Each Barrier Alternative.
- KJ Recommends Additional Evaluation of the Top Model Scenarios with Consideration for:
  - Operation & Maintenance Impacts
  - Barrier Materials
  - Site Constraints
  - Constructability/Structural Requirements
  - Schedule for Implementation
  - Impacts on Neighborhood
  - Permitting
  - Total Project Cost

# Next Steps

# Next Steps

- Austin Water will study the most effective noise treatments presented by the consultant
  - Evaluate their feasibility, constructability and compatibility with ongoing operations;
- Solutions that are feasible and recommended by Austin Water will be presented to neighbors for comment in 2024.
- Recommended solutions will then be considered for funding in Austin Water's Capital Improvement Program (CIP). Projects are added annually.

# Typical Timeline for CIP Projects

## **Project Design: 12-24 months**

- Hire engineering firm
- Survey & Geotechnical Services
- Design
- Apply for permits

## **Construction: 18-24 months**

- Set up project
- Order materials
- Prepare site
- Install environmental controls
- Construct Improvements

## **Contract Bid and Award: 6-9 months**

- Contractor selection
- Approval by Water and Wastewater Commission and City Council

# Basin Cleaning Schedule

- Basin 1 will be cleaned in January 2024
  - This has been delayed in anticipation of this report being completed
- Temporary sound mitigation solutions will be used based on learnings from the report
- We will continue these measures to reduce impact to neighbors:
  - Limit work hours to 8 a.m. to 5 p.m.
  - No work on weekends or holidays
  - Locate some equipment on north side of basins

# Questions and Answers

# Thank you for attending.

**Community Outreach Contact:**

Emlea Chanslor

512-972-0145

emlea.chanslor@austintexas.gov

- Call **512-972-1000** and select Option 1 to report concerns at the plant, such as noise. Please tell the agent that you want to report a “Neighbor Concern at Ullrich Water Treatment Plant.”
- Sign up to receive updates by email at **[austintexas.gov/Ullrich](https://austintexas.gov/Ullrich)**
